

Activation Accelerators - In-App Configuration for SAP S/4HANA Cloud Scope Items J45 and 18J (6PQ)

Task automation Capability and Feature Highlights

THE PROBLEM

For a new customer, the onboarding and system preparation tasks take a long time to complete. There are several activities like workflow management, business rules, and other configuration settings that need to be set up to successfully implement the J45 and 18J scope items. This process is very time-consuming, error-prone, and adds lot of manual effort.

TASK AUTOMATION SKILL DESCRIPTION

- Task automation reads the input configuration file placed in the pre-defined root folder.
- Task automation executes the following configurations using the values provided in the input configuration file:
 - Manage Workflows for Purchase Orders (J45)
 - Manage Teams and Responsibilities – Procurement (J45)
 - Manage Workflow for Purchase Requisitions (18J)
 - Manage Workflows for Purchase Orders (18J)

BUSINESS VALUE – BENEFITS

Automates the workflow, teams and responsibilities, and other settings for the J45 and 18J scope items, which reduces manual effort and speeds up implementation process.
