

Mass Maintenance of Source Lists (4TK)

Automation Capability and Feature Highlights

THE PROBLEM

An updated source list is important to companies as it includes the different vendors and time intervals for which a material can be ordered. The creation and maintenance of source list is an ongoing task due to various organizational and operational changes.

Without automation, this task is prone to error and time-consuming, and may cause delay that can potentially impact procurement and sales processes, among others.

AUTOMATION DESCRIPTION

The automation performs the mass maintenance of source lists in SAP S/4HANA Cloud system and supports the following actions:

- Create new source lists (C)
- Read and extract details of existing source list (R)

Detailed steps for the automation are as follows :

- User completes input template with desired action and relevant source list details, sends the completed template via email or saves in a specified folder
- Automation processes each completed input template saved in the specified folder.
- Automation performs the relevant user-specific action for the source list in SAP S/4HANA Cloud system.
- Automation logs the results and sends email notification to the user.

BUSINESS VALUE – BENEFITS

- Reduction in manual effort and time spent on creating and maintaining source lists, and correcting errors in source list details.
- Improvement in data quality of source lists.
- Increased efficiency in source list maintenance.
