

# Activation Accelerators - In-App Configuration for SAP S4HANA Cloud Scope Item 1F1 2LH 2V7 BD9 (6PE)

## Task automation Capability and Feature Highlights

### THE PROBLEM

For a new customer, the onboarding and system preparation tasks take a long time to complete. There are several activities like workflow management, business rules, and other configuration settings that need to be set up to successfully implement the 1F1, 2LH, 2V7, and BD9 scope items.

This process is very time-consuming, error-prone, and adds lot of manual effort.

### TASK AUTOMATION SKILL DESCRIPTION

- Task automation reads the input configuration file placed in the pre-defined root folder.
- Task automation executes the following configurations using the values provided in the input configuration file:
  - Create Condition Records (1F1)
  - Manage Workflows for Purchase Orders (2LH)
  - Manage Purchasing Info Records (2LH)
  - Manage Teams and Responsibilities (2V7)
  - Custom Logic (BD9)
  - Manage Teams and Responsibilities (BD9)
  - Manage Sales Document Workflows (BD9)

### BUSINESS VALUE – BENEFITS

Automates the workflow, teams and responsibilities, and other settings (1F1, 2LH, 2V7 and BD9), which reduces manual effort and speeds up implementation process.
