

Integration of SAP S/4HANA OP or SAP ERP 6.0 with SAP Localization Hub using SAP Cloud Platform Integration

PUBLIC

Setup guide

This document is intended to help you with integration of your on premise system (SAP S/4HANA or SAP ERP 6.0) with various online validation services through integration flow running on SAP Cloud Platform Integration.

Configure and deploy integration flows

- Configure integration flows in the integration package:
 - VIES VAT Registration Number Validation Service
 - Production environment URL
http://ec.europa.eu/taxation_customs/vies/services/checkVatService
 - Test environment URL
http://ec.europa.eu/taxation_customs/vies/services/checkVatTestService
- Deploy configured integration flows
- Deploy *Route Validation Request to Online Validation Service* integration flow
- Navigate to Operations View and mark down endpoint URL of *Route Validation Request to Online Validation Service*
It will be required later when creating RFC destination in your on-premise system

Steps performed on your On-Premise System

- Implement SAP note 2866929
