

SAP Project Intelligence Network Integration with SAP S/4HANA Cloud
Version Change Log

Contents

Version 1.0.9..... 2

Version 1.0.8..... 2

Version 1.0.9

Artifact: Import Project Plan from Enterprise Project

- **Externalized sender address**

Type: Changed

Description:

If the sender address needs to be changed the consumer of the content was forced to update the content with the effect that content updates couldn't automatically taken over. To be able to define the sender address without changing the content the sender address has been externalized and can now be defined via configuration.

- **Externalized Application address**

Type: Enhancement

Description:

Added the configuration parameter "ApplicationBaseUrl", which is used to generate a navigation URL to the backend system. This URL will be used to build navigation URLs which will be used within SAP Project Intelligence Network, to directly navigate to the corresponding backend project. This parameter can be found on the configuration dialog in the "More" section.

Version 1.0.8

Artifact: Import Project Plan from Enterprise Project

- **Added mapping for project element ID in EPPM integration content**

Type: Enhancement

Description:

Attribute *ProjectElement* from EPPM structure will be mapped with the project plan attribute *humanReadableId*.
