Master the requirements of GDPR

Article 15 (1) of the GDPR allows data subjects to request information about personal data. In this information, the stored data of the requestor must be provided. The "data collection process", is cross-system, cumbersome, rule-based and repetitive. Thus, it offers ideal conditions for the use of RPA and enables the establishment of a data protection culture with our solution.

The violation of the requirements of the GDPR is accompanied by fines of up to €20 million or 4% of the annual turnover and often not insignificant damage to the company's image.

Product description

The bot supports the data protection officer in responding to inquiries and compiles the respective personal data of the inquirer from different systems. A ready-to-use response is formulated, which only needs to be checked and sent by the data protection officer.

Product components

Scoping Workshop

Basics RPA
Process Actual State
General conditions for PoC

1 Day

Kick-off event where project stakeholders come together, the process is being discussed, and the framework for the project is established.

Proof of Concept

Simple Automation
Technical Feasibility
Economic Benefits

5 Days

A simple bot is implemented by the development team via a provided software license and the functionality is analyzed and tested.

Process Implementation

Introduction of SAP IRPA
Process Optimization and Implementation
Know-how Transfer

Individual Offering

The bot will be optimized using the experience from the PoC, the SAP IRPA software solution will be implemented, and the staff will be enabled to use RPA.

1-Click Activity

A single trigger event initiates the execution of multiple activities for a quick request response on time and in compliance with the law.

Standardization

Thanks to automation, critical process steps are carried out in a rule-based and error-free manner using predefined specifications.

Single Center of Action

A bot controls a wide range of systems, bridging silos between departments to provide data.

SAP Intelligent RPA

SAP's RPA solution is particularly interesting for companies with a stringent SAP strategy as a fundamental component for Intelligent Enterprise. SAP IRPA offers low entry barriers due to the tiered pricing model, currently starting at €500/month. As a cloud-based service of the SAP Business Technology Platform and part of SAP RISE as well as the CPEA, a quick and easy start-up is enabled. SAP IRPA provides best-in-class SAP connectors and also enables automation of non-SAP systems. The Bot Store additionally provides out-of-the-box automations for many business processes.
