

# Create Purchase Requisitions from Excel (48M)

## Bot Capability and Feature Highlights

### THE PROBLEM

Oftentimes, companies have to deal with a high volume of purchase requisitions that need to be created in the system. Creating purchase requisitions manually is a tedious, monotonous and time-consuming task which can easily be automated.

### BOT SKILL DESCRIPTION

- Bot Input : Users provide the purchase requisition details based on the Excel template file.
- Bot reads the input data for purchase requisition from the Excel template file and creates the purchase requisition in SAP S/4HANA Cloud.
- Bot records the purchase requisition number of the created purchase requisitions in the Excel output file.
- Bot sends a communication email to the recipients with the bot run status.
- Bot's log report is compiled and stored in the success and error folders in the base folder based on the status.

### BUSINESS VALUE – BENEFITS

- Reduce manual effort to create purchase requisition by automating the process.
- Reduce the scope of human errors creating erroneous records in the system.
- Optimize data quality and transparency by sending communication to stakeholders.

### Bot Process Overview
