

Cloud Integration Automation service: Introduction

As many customers adopt SAP Business Suite—a comprehensive set of integrated solutions combining Cloud ERP with Line of Business (LOB) applications—integration becomes a critical architectural pillar for delivering seamless, end-to-end business processes, and unlocking the full potential of the SAP Business Suite.

Cloud Integration Automation service (CIAS) is an SAP BTP-based integration application available at no **additional cost**. It generates guided workflows to integrate SAP cloud solutions with on-premise and other SAP cloud solutions. Each guided workflow contains automated tasks and step-by-step instructions for manual tasks enabling quick and easy integration configuration.

CIAS for Shopify – Cloud ERP Integration

Managing business processes across SAP S/4HANA Cloud Public Edition and Shopify can be challenging, as it requires extensive documentation review, identification of relevant components and entities, understanding the system landscape, creating a detailed integration plan, and engaging appropriate subject matter experts across multiple iterations. When performed manually, these steps make integration a complex and time-consuming process.

To address this challenge, we introduce a consolidated guided workflow that orchestrates every step of the entire integration process. Built on the Cloud Integration Automation service and powered by SAP Integration Suite, it is designed to simplify and streamline your operations.

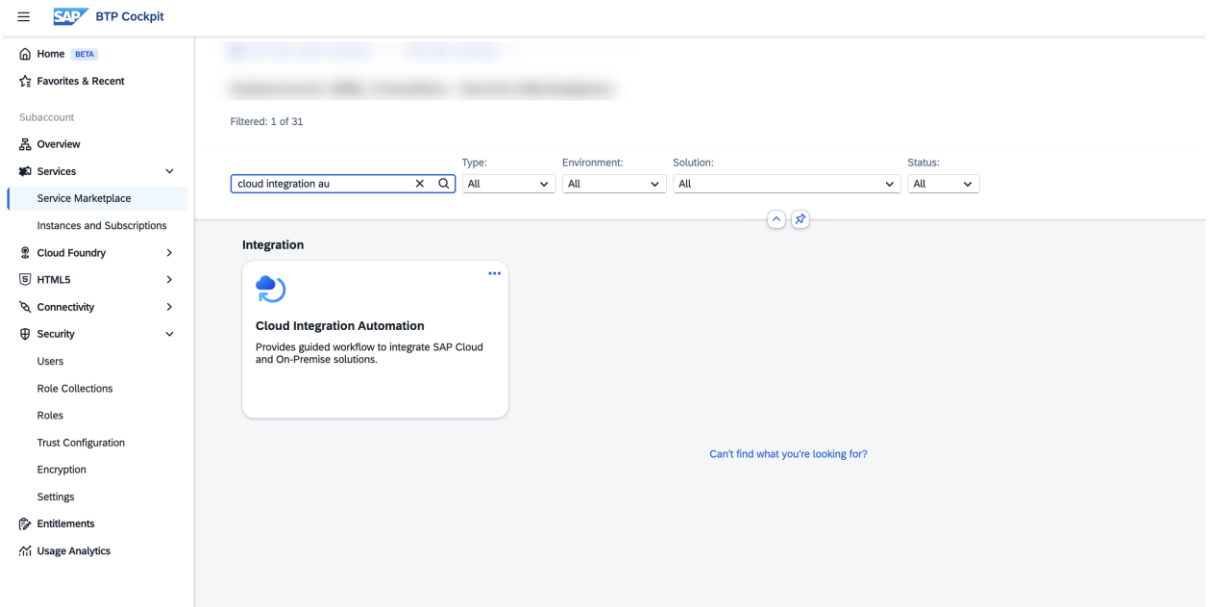

The CIAS guide for Shopify Integration with SAP S/4HANA Cloud package is designed to boost the integration with end-to-end bidirectional business processes like the Master Data creation ,Order fulfilment and Cancellations between SAP S/4HANA Cloud Public Edition and Shopify. This enables smooth, semi-automated data flow and operational consistency across both platforms

With CIAS , the customers and partners can:

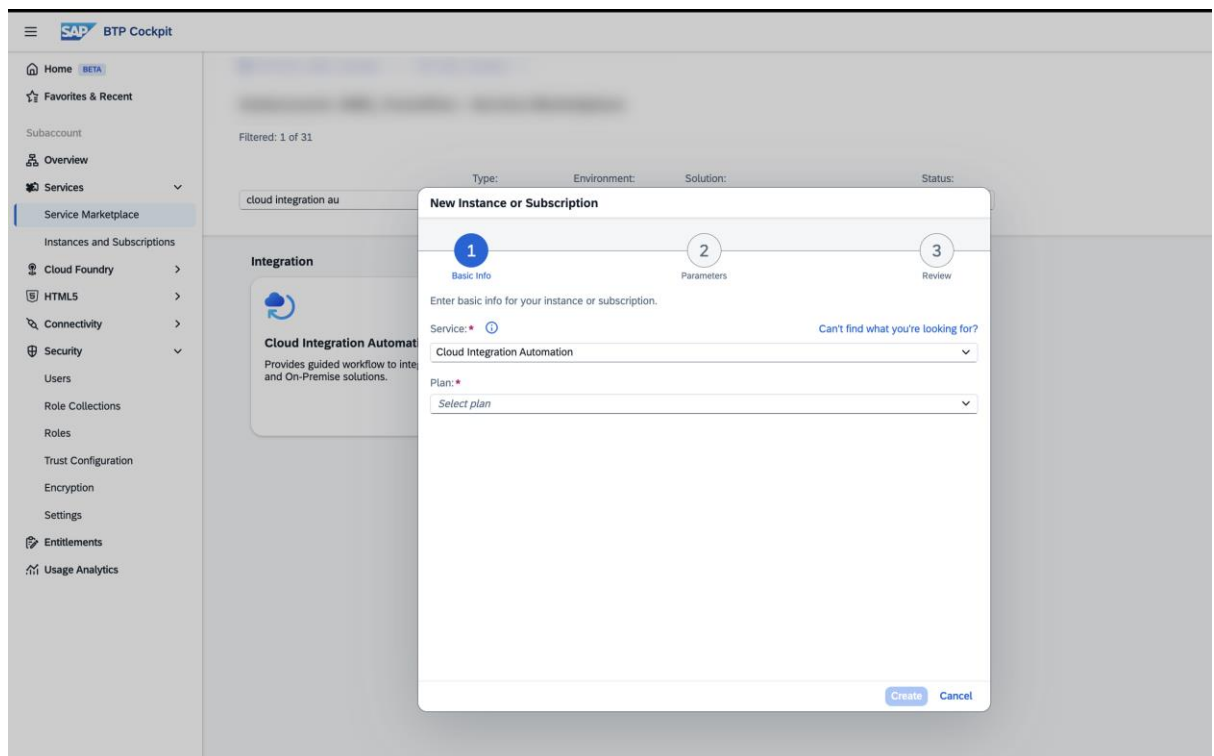

- Achieve seamless data synchronization between SAP and Shopify
- Leverage fully automated S/4HANA Public Cloud tasks and configurations on CIAS, complemented by semi-automated integration workflows in Integration Suite
- Access the underlying integration landscape and retrieve integration entity or component information
- Leverage guidance at each component level with role-based implementation of each task
- Utilize step-by-step manual instructions with semi-automated workflows for key business processes
- Reduce manual tasks and potential errors, thereby improving operational efficiency

How to onboard CIAS: S4HANA Cloud <> Shopify

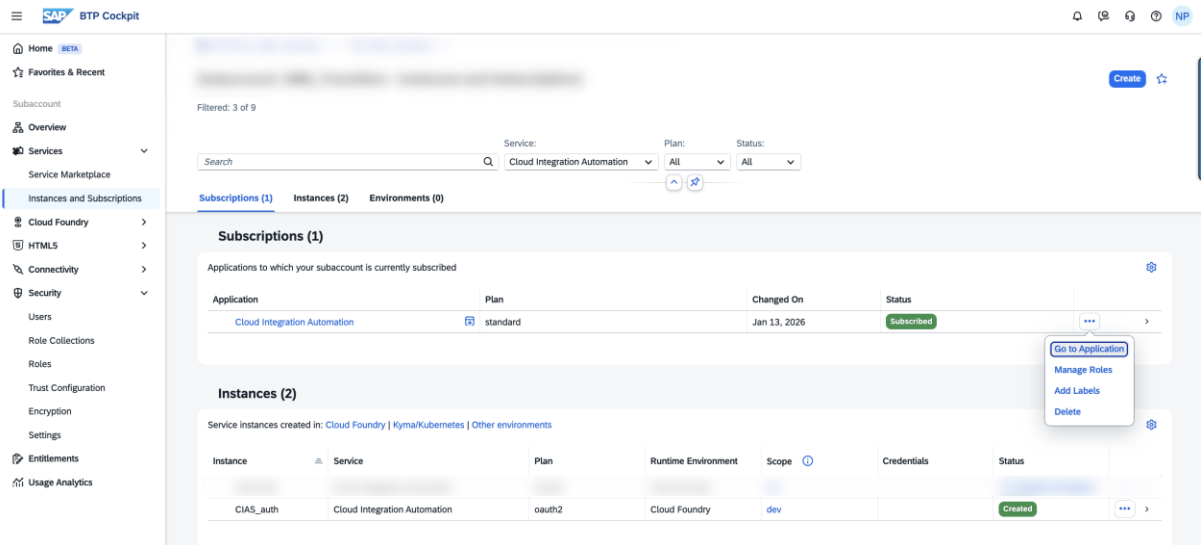

1. Subscribe to the Cloud Integration Automation service (free of charge) available on the Service Marketplace in your BTP account

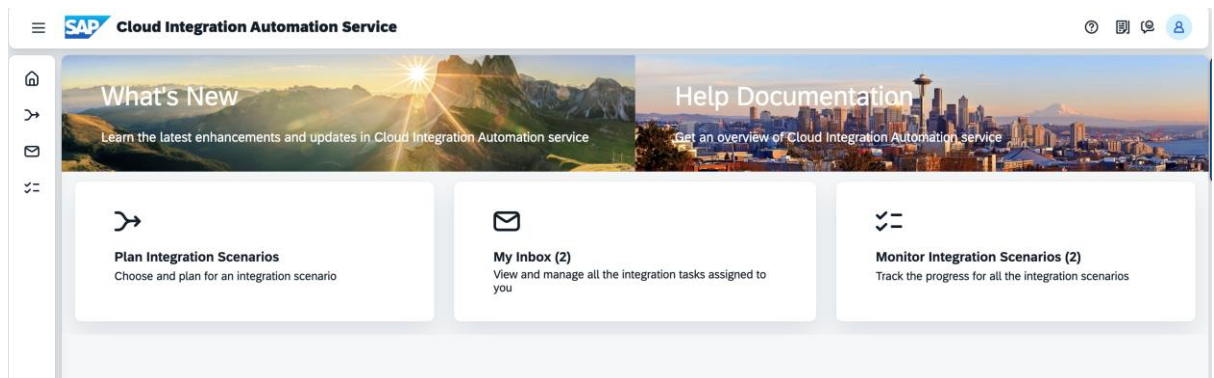

2. Create a CIAS instance with the Cloud Foundry runtime environment

3. Choose **Go to Application** to access the CIAS launchpad.

4. Click on the **Plan Integration Scenarios** tile.

5. Search for Shopify Integration
