

QforIT Error Alerting for SAP Cloud Platform Integration Services

Use Case: Monitor your tenant with SAP ODATA APIs

Situation

- Using SAP Cloud Platform Integration Services Tenant
- Multiple interfaces/iFlows deployed
- Interfaces/iFlows with different priorities

Challenges

- Standard monitoring is either done through Eclipse or WebUI
- Standard monitoring does not prioritize
- Standard monitoring has no alerting mechanism

Solution Innovation

- Easy way to prioritize your business processes using ValueMapping
- Automating your error alerting
- Customizable timeframes for per priority
- Based on standard SAP ODATA APIs

Users

- Integration Consultants
- Monitoring & Support teams
- End-users

Value Drivers

- Using standard SAP technology this iFlow makes it possible to send out alerting emails in case an iFlow runs in error. You can customize your settings, based on your own requirements

Industry
